

Cabina — Virtual Try-On

Module for PrestaShop 8 and 9 · version 1.2.0 · User guide

1. What the module does

Cabina adds a **“Try it on”** button to your product pages. Your customers see the garment worn on their own photo, or on one of 40 ready-made models, before buying. Cabina also suggests the right size from the customer's height and weight, using the size charts you upload.

- AI-generated try-on of the garment on the customer's photo or on a model (4 age ranges, 4 body types).
- Size recommendation for clothes and shoes, with a fit preference (fitted, regular, relaxed).
- Outfit try-on: up to 3 garments together in one image (optional, enabled by you).
- Available in 8 languages: English, Italian, French, Spanish, German, Japanese, Brazilian Portuguese, Indonesian.

2. Requirements

- PrestaShop 8.0 or later, including PrestaShop 9.
- A Cabina account. The free plan includes 10 try-ons per month; you can create it on cabina.io.
- The public API key of your Cabina account (it starts with `cab_live_`).

3. Installation

1. In your PrestaShop back office open **Modules → Module Manager**.
2. Click **Upload a module** and select the file `cabina.zip`.
3. When the upload is complete, click **Configure**.

4. Configuration

1. In your Cabina dashboard open the **Installation** page and choose the **PrestaShop** tab: your API key is shown there. Copy it.
2. Paste the key in the **API Key** field of the module and click **Save**.
3. In your Cabina dashboard, on the **Widget & Branding** page, add your shop's domain to the authorised domains. While the list is empty the button appears on no site at all.
4. Open any product page of your shop: the “Try it on” button appears in the product information area.

If the button does not appear, check that the key starts with `cab_live_`, that your shop's domain is in the authorised list, and that the product belongs to a category enabled on the Widget & Branding page.

5. What you manage from the Cabina dashboard

Page	What it is for
Widget & Branding	Button colour, text and logo, product categories, default language, authorised domains, size percentage (off by default).
Size Charts	Upload your size charts (CSV) to enable size recommendations.
Mix & Match	Turn on the outfit try-on and create collections of garments to combine. With 3 garments together you pay for 2 try-ons.
Metrics	Sessions, completed try-ons and daily trend.
Billing	Your plan and the try-ons used this month.

6. Privacy

- The customer's photo is sent only after explicit, revocable consent. Without consent, the customer can use the Cabina models.
- Measurements are used to suggest a size and are not stored.
- The try-on image is reachable only through a temporary link and is deleted after 30 days.
- No profiling cookies and no tracking pixels.

7. Technical notes

- The module uses the `displayProductAdditionalInfo` hook and adds one script tag to product pages only.
- It creates no database tables and changes no core file. It stores one configuration value, `CABINA_API_KEY`.
- External domains used on the storefront (listed in `header_csp.txt`): `www.cabina.io` for the widget and its service, and the Cabina image storage domain for try-on results.

8. Uninstall

In **Modules** → **Module Manager** choose **Uninstall** on Cabina. The API key is removed and nothing is left in your database. Your Cabina account and plan are not affected.

9. Support

Write to info@cabina.io. We reply within one business day.
